# CS180

# CS180: Focus on Visual Data

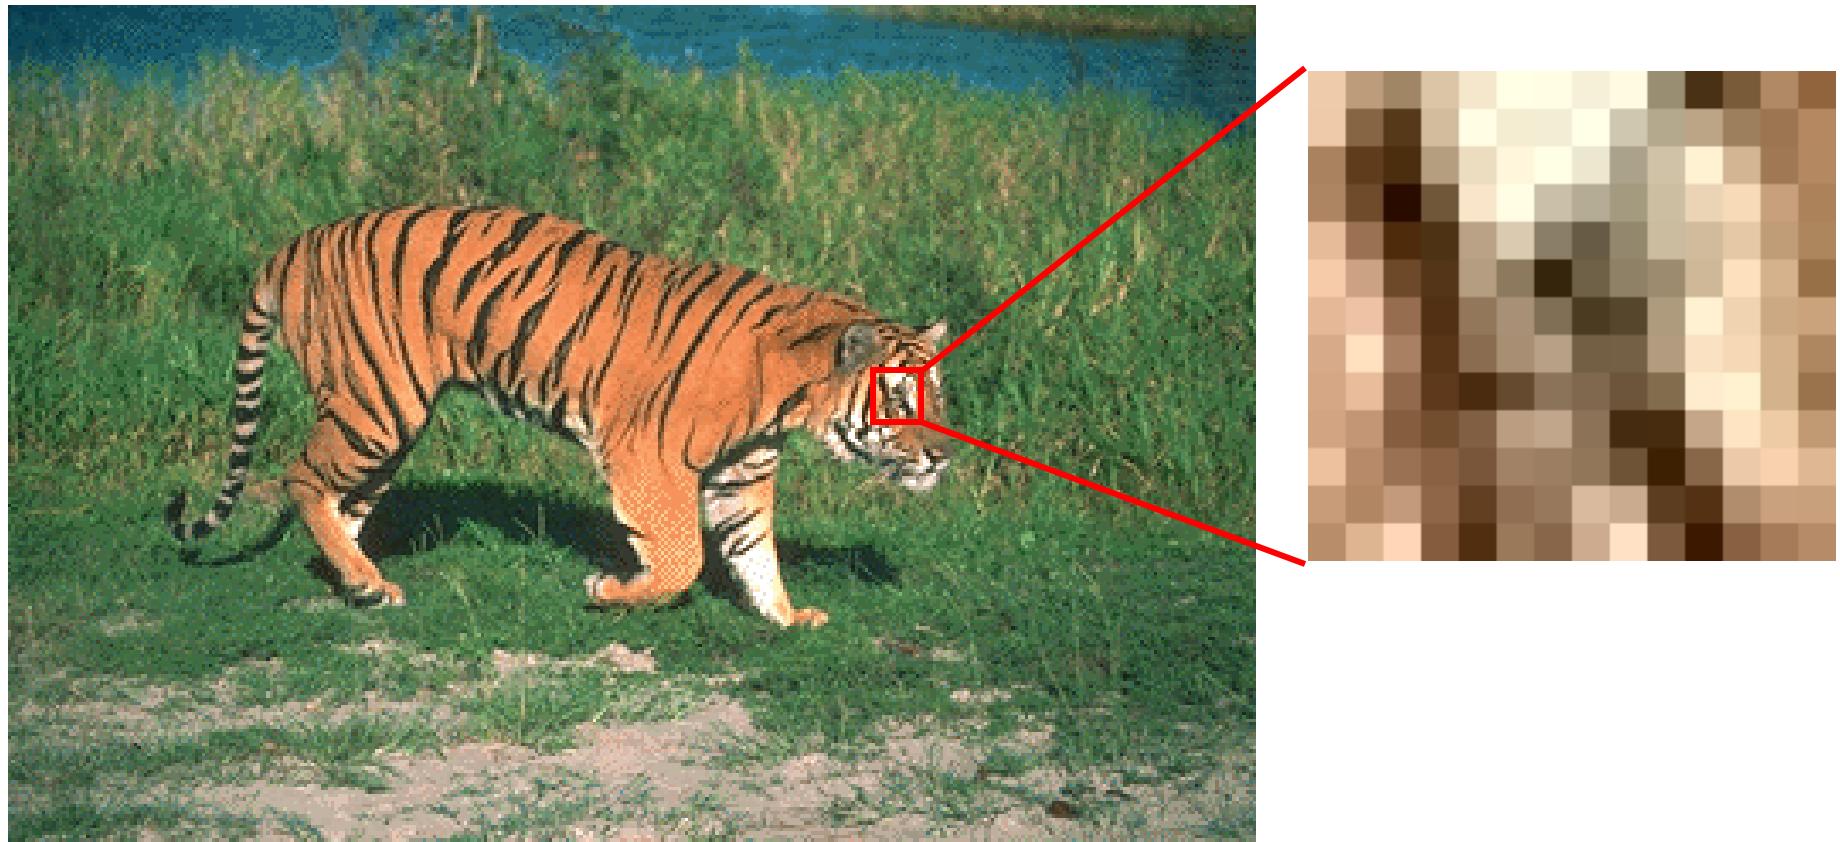

---

The key objective of this class is to become **friends with every pixel!**

# Course objectives

---

1. You will appreciate the fundamental difficulty of understanding and computing with **visual data**

# Course objectives

---

2. You will get a foundation in image processing and computer vision, **from the ground up**:

- Camera basics, image formation
- Convolutions, filtering
- Image and Video Processing (filtering, anti-aliasing, pyramids)
- Image Manipulation (warping, morphing, mosaicing, matting, compositing)
- Projection, 3D, stereo
- Data-driven methods
- Generative Models
- ...

# Course objectives

---

3. You will get a more intuitive understanding of important mathematical and computational concepts

- Gradients
- Change of basis
- interpolation, extrapolation
- Fourier Transforms
- PCA
- Deep Learning
- Auto-regressive Models
- Diffusion Models
- ...

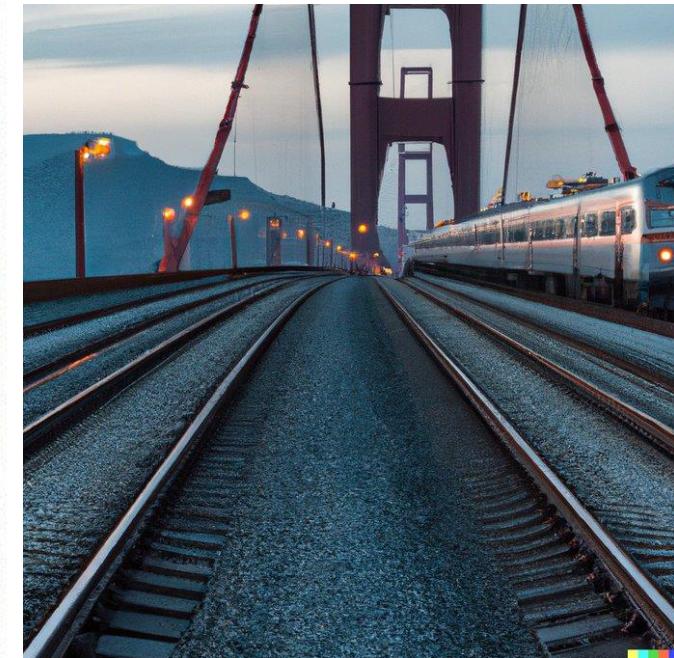

# Course objectives

---

4. You will learn approaches for **visual synthesis**

Graphic by James Hays

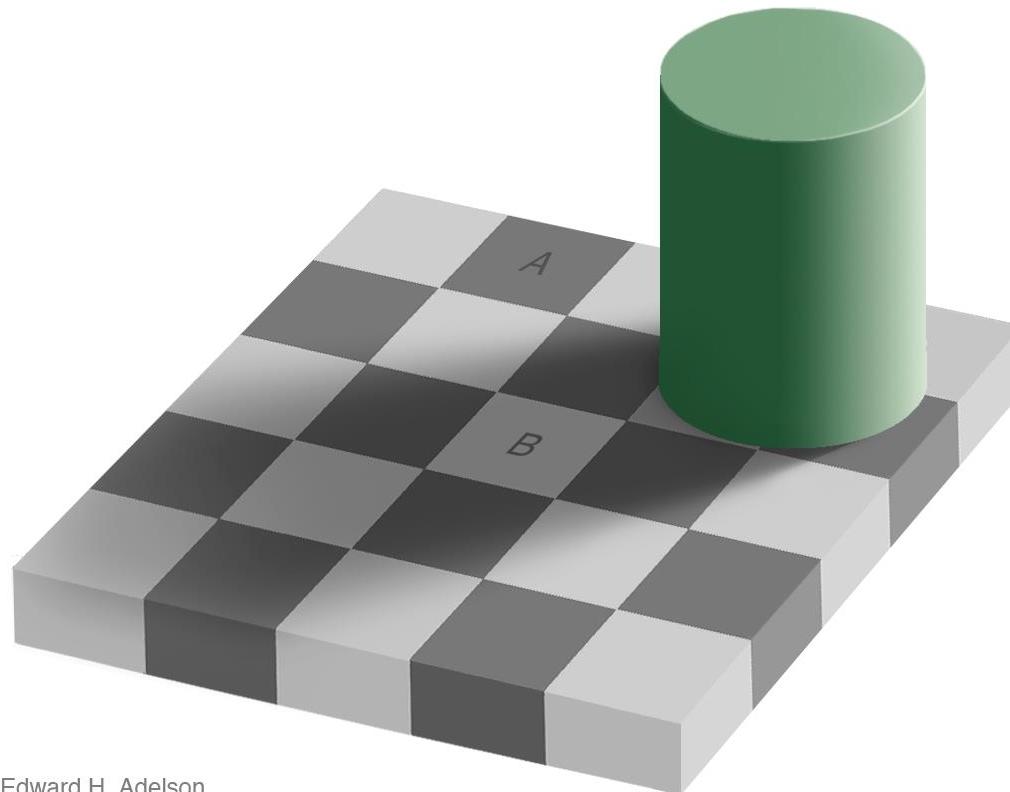

DALL-E + Danielle Baskin

# Course objectives

---

4. You'll better appreciate human visual perception

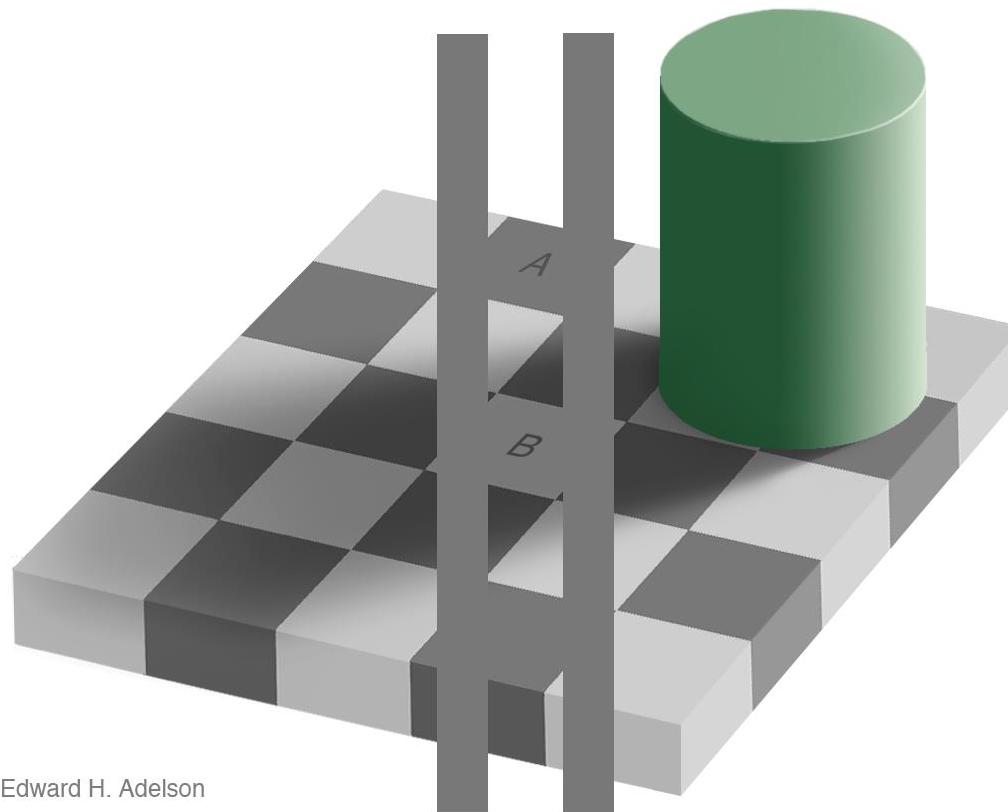

Edward H. Adelson

# Course objectives

---

4. You'll better appreciate human visual perception

# Different people see different things

---

[https://en.wikipedia.org/wiki/The\\_dress](https://en.wikipedia.org/wiki/The_dress)

# Course objectives

---

5. You will learn about the **history of ideas** in visual computing

- Did you know Large Generative Models go back to 1940s?
- Or that Deep Learning started with a Nobel Prize on Neuroscience of the Visual Cortex in the 1960s?
- ...

# Course objectives

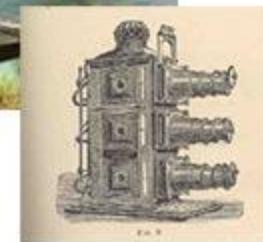

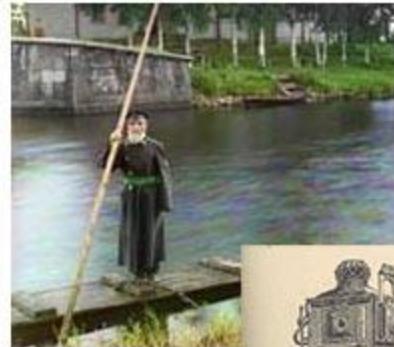

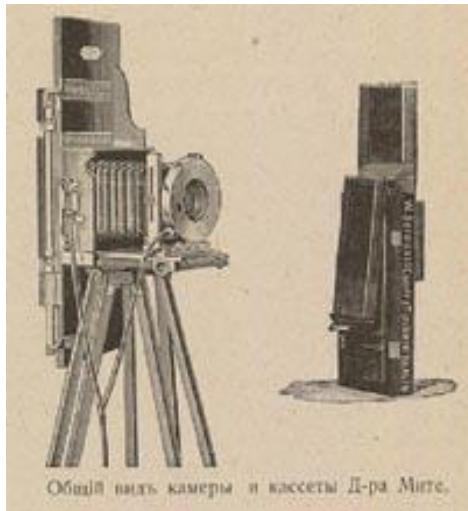

---

6. You'll have fun doing cool stuff, coding up a storm, largely from scratch

# Programming Project #1

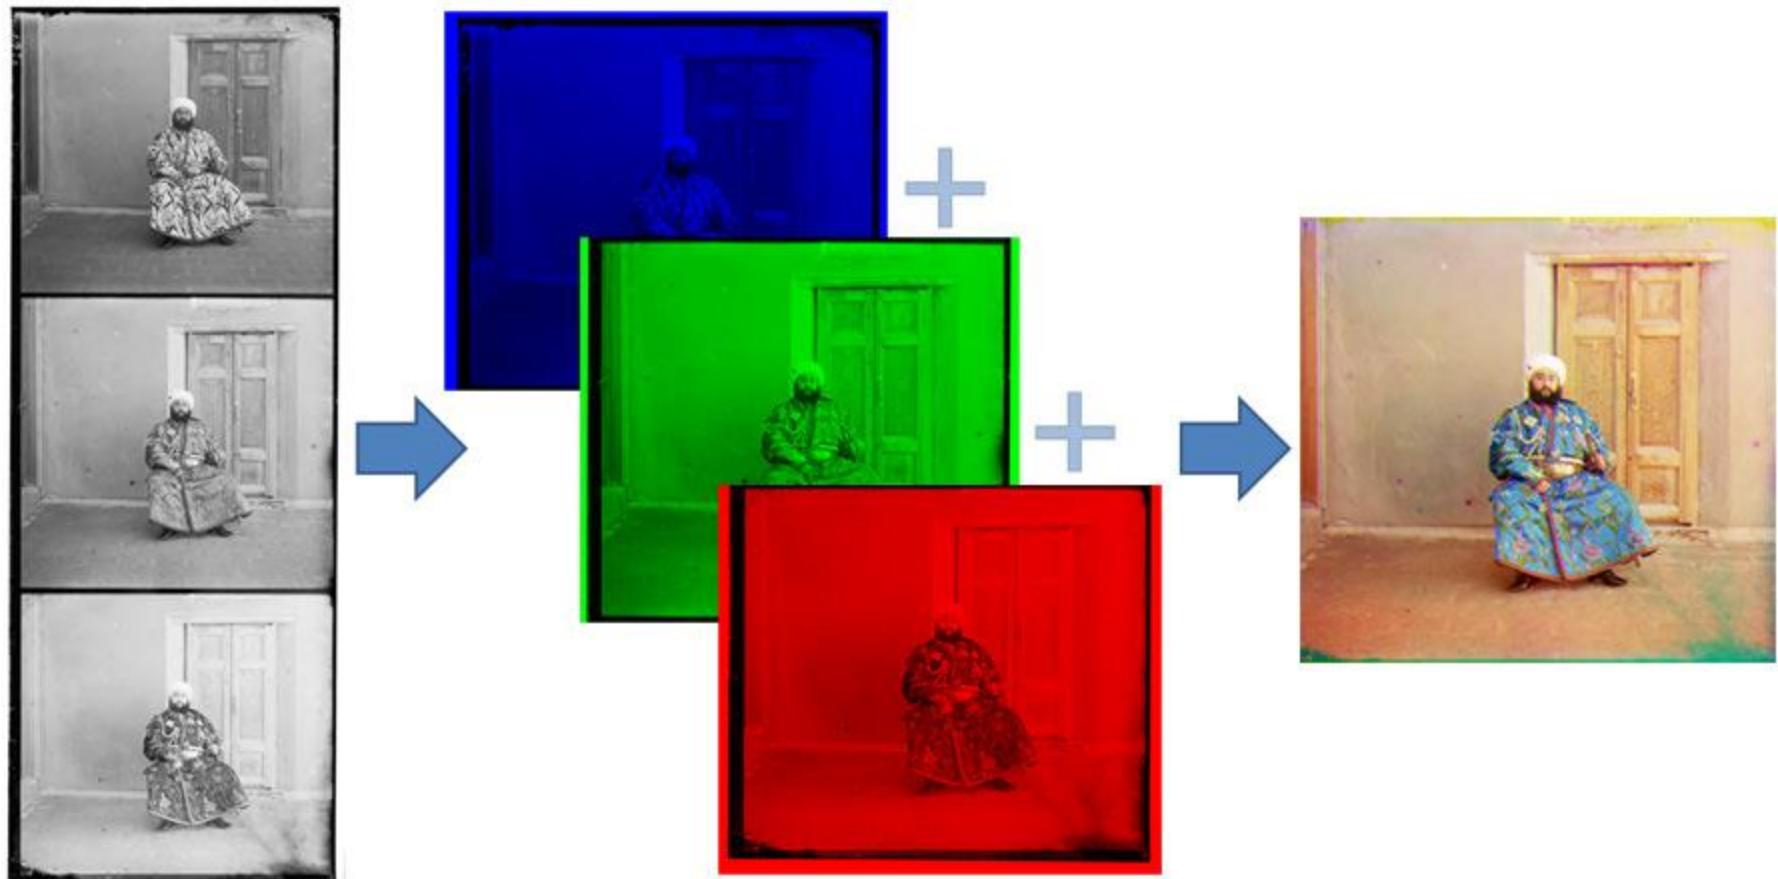

---

## Prokudin-Gorskii's Color Photography (1907)

# Programming Project #1

---

**Project out TODAY!**

# Project 2: Fun with frequencies

---

**What you see...**

I see an angry guy

It's a woman!

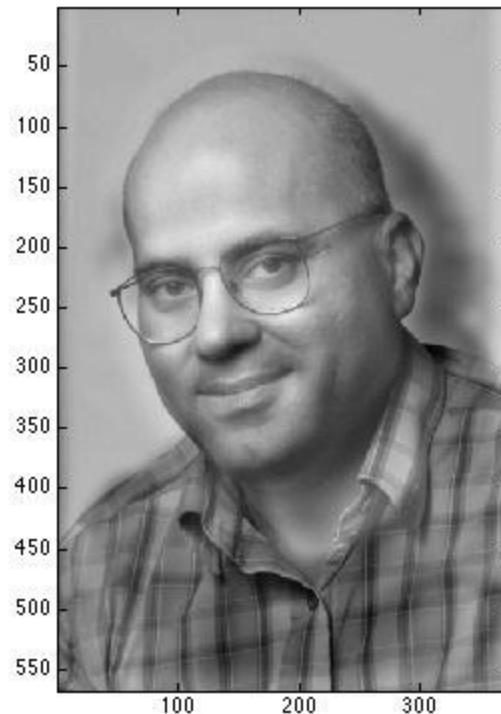

**From Far Away**    **Up Close**

**From Far Away**

**Up Close**

# Project 2: Fun with frequencies

---

**Prof. Christos Papadimalik**

# Project 2: Fun with Frequencies

---

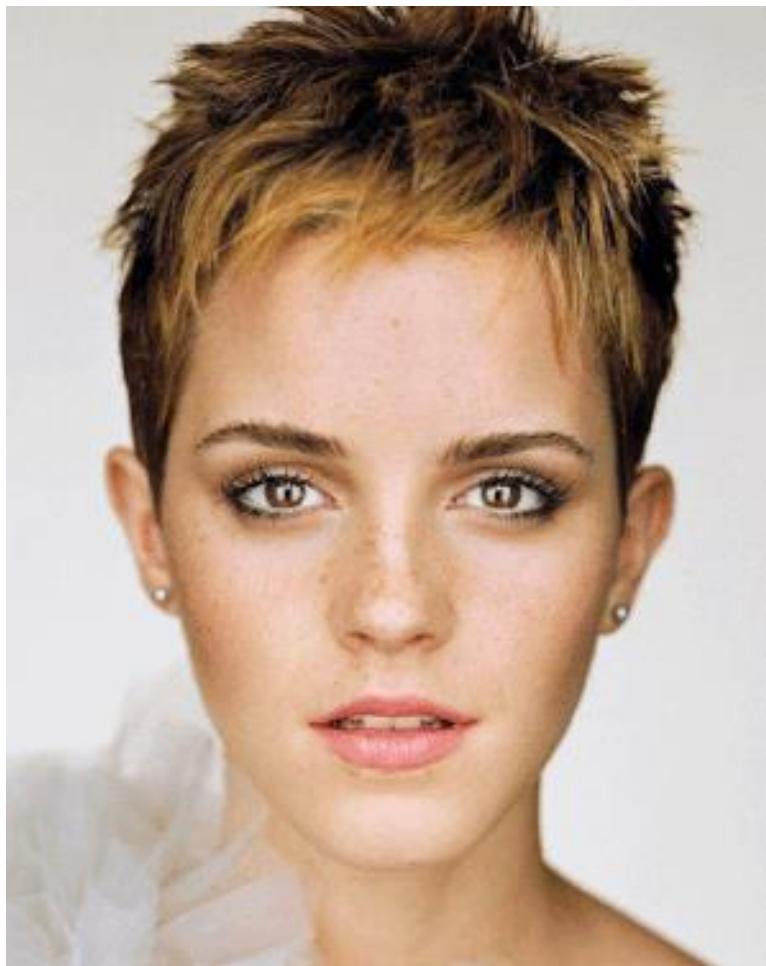

cloning

seamless cloning

sources/destinations

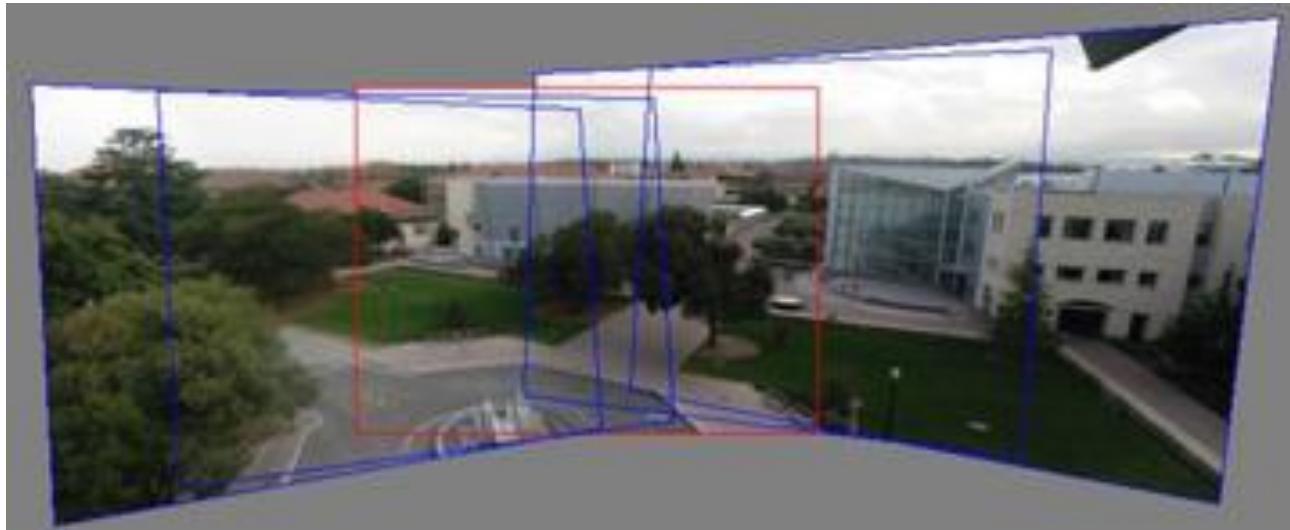

# Project 3: Face modeling and morphing

# Project 4: Panorama Stitching

---

## Photo Mosaics

# Project 5: Diffusion and Visual Anagrams

a photo of an old woman

a painting of a deer

# Final Project

---

Something cool!!!

- We will have some pre-canned projects
- Will also have some suggestions, cool datasets, etc
- Or you can do whatever you want!

(can be done in groups of 2 or 3)

# Example Pre-canned Project

---

## Tour Into the Picture

# Paper Pop-up

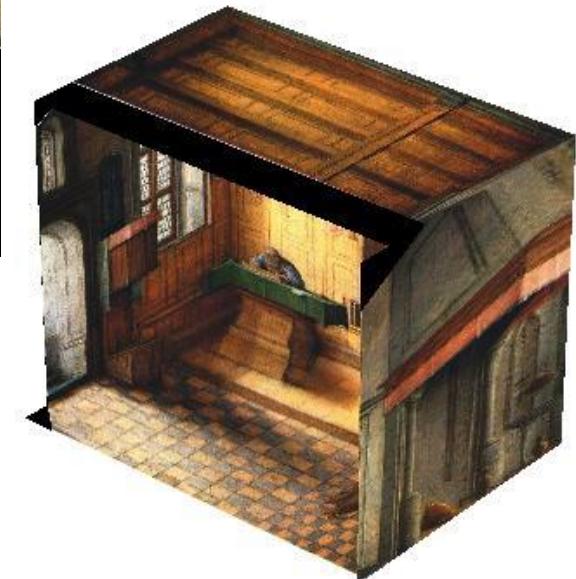

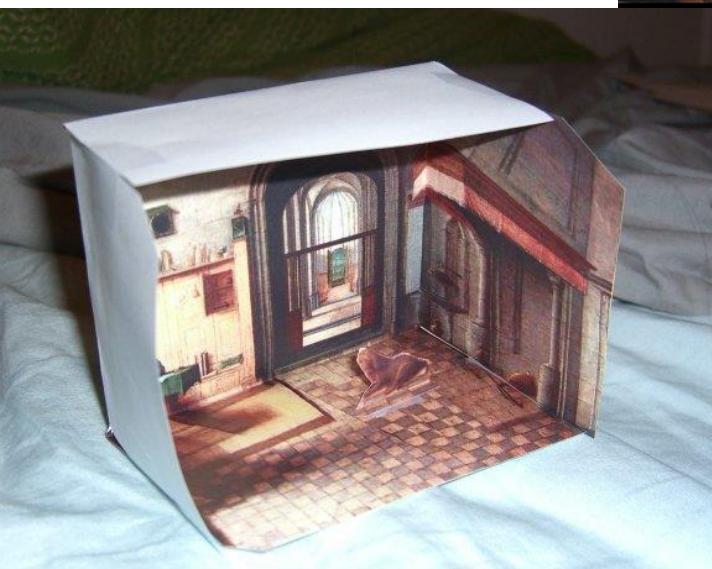

---

Step 1: define planes

Step 2: rectify each plane

Step 3: compute 3D box coords

# Sample final project from previous years

# Sample final project from previous years

---

<https://www.youtube.com/watch?v=PCBTZh41Ris&feature=youtu.be>

# For each project:

---

Derive the **math**, implement stuff **from scratch**,  
and apply it to your **own** photos

Every person does their own project (except final  
projects)

Reporting via web page (plus submit code)

---

# Class Organization / Administrivia

# General

---

## Prerequisites

- Linear algebra!!! (EE16A, Math 54, Math 56, or Math 110)
- Multivariable Calculus (Math 53)
- Good programming skills (at least CS61B)
- Deep Learning experience (e.g. CS189, CS182, may be concurrent)
- Creativity

Emphasis on programming projects!

- Building something from scratch

Graduate Version (CS280A):

- Final project required (not pre-canned), including conference-style report paper

# Administrative Stuff

---

## Grading

- 60% Programming Projects (5 in total)
- 20% Final Exam (Last Lecture, **Wednesday 12/04/24**)
- 15% Final Project
- 5% Pop Quizzes
- Class Participation: *priceless*

## Late Policy

- Five (5) **emergency** late days for semester. The expectation is you will never use them.
- 10% each additional day afterwards

## Extra Points

- Most projects will have optional “bells & whistles”
- These extra points could be used to **drop one or two quizzes**

# Rule # 1: No lecture recordings

This is **an in-person class**. You are to come to the lecture and participate! Attendance is required.

Only available by request for truly exceptional circumstances, e.g. severe illness. See GSIs.

# Rule # 2: Deadline is a deadline

In real life there are no extensions

This is a FUN but INTENSE class, projects come **one after another**

Slip days are for **emergencies**. If nothing dramatic happened to you during the semester, you should have all your slip days left.

Projects are time consuming. Start early!!!

# Rule # 3: TA's don't debug code

TA's don't debug code for you.

Part of the skill is to learn how to ask questions to debug the issue without presenting the code

Visualize the results and send those to figure out what is wrong

Use the pixels – become friends with visual debugging

# Getting help outside of class

---

## Course Web Page

- <http://inst.eecs.berkeley.edu/~cs180>

## Online forums:

- Ed (add yourself via course webpage)
- Gradescope (add yourself via course webpage)

## Discussion Sections:

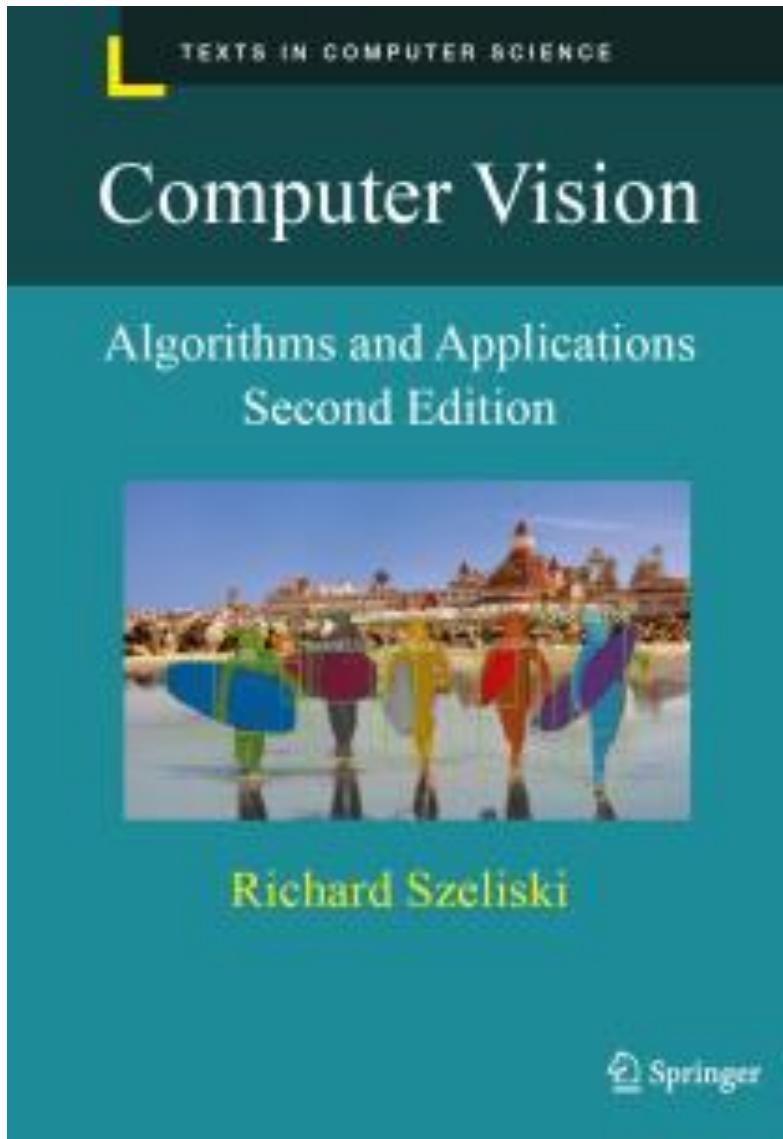

- Two each week
- see webpage for times

## Office hours

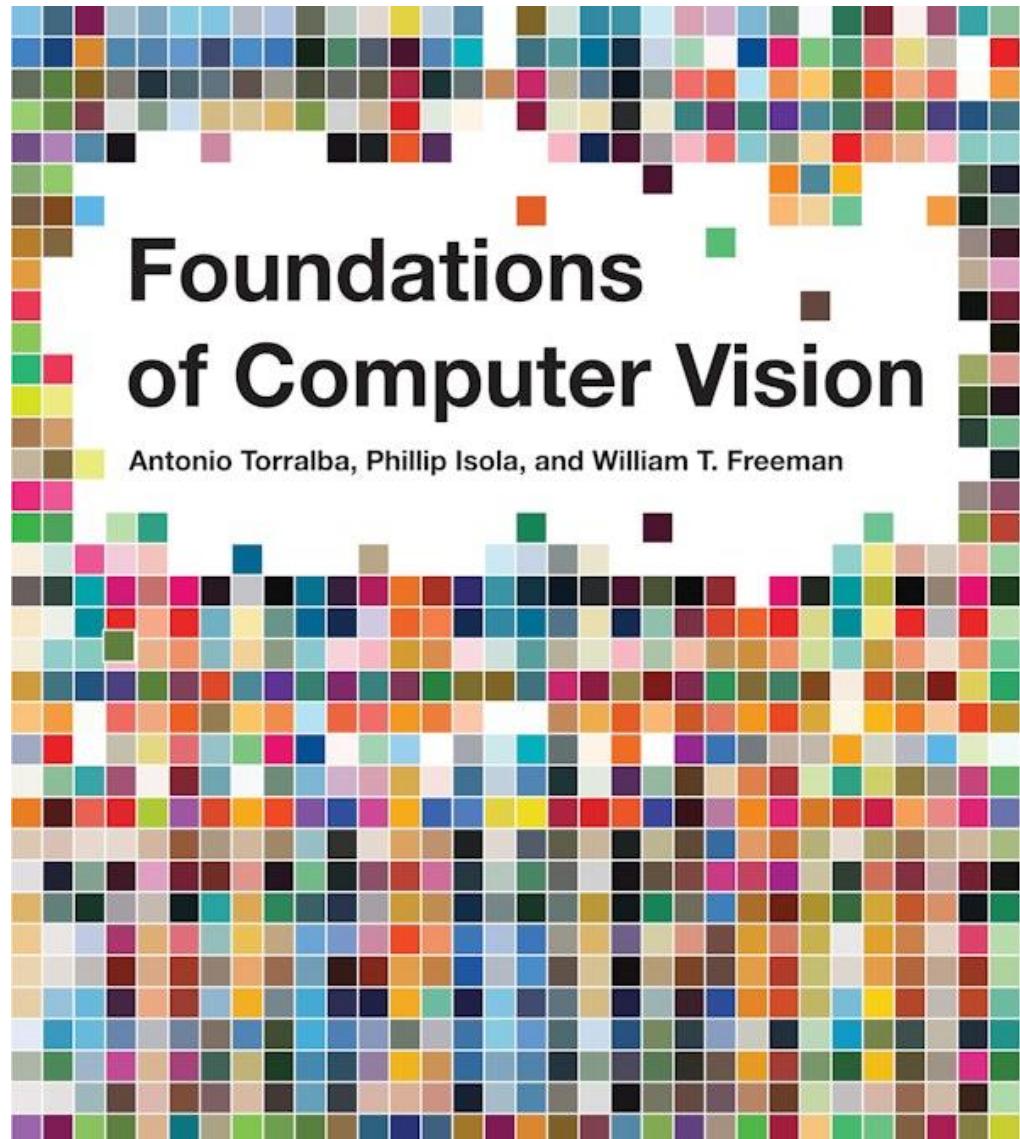

- For me: after each lecture
- For others, see webpage

# Textbooks

---

<http://szeliski.org/Book/>

<https://mitpress.mit.edu/9780262048972-foundations-of-computer-vision/>

# Academic Integrity

---

- Can discuss projects, but **never share code**
  - You must type every character yourself
- Don't search for code or copy from a friend
- If you're not sure if it's allowed, ask
- Cite any sources and inspirations

# Our GPT policy

---

- GPT is a wonderful tool
  - And so is calculator, Wolfram Alpha, Wikipedia, Stack Overflow, etc.
- but before you use a calculator, it's important to learn how to do long division by hand.
- In this course, we want you to do things **from scratch**.
  - So, no Stack Overflow, no searching for code, no fancy libraries, and no GPT
- You can use GPT (sparingly) to **debug** your code, but you must acknowledge and submit transcript of your GPT sessions

# Waitlists

---

- We are limited by room size (~300 people)
  - However, we expect 50-70 people to drop after the first couple of projects 😊
  - So, chances are good to get in, but you need to start doing projects
- 
- For CS280A, everyone is on the waitlist
    - Fill in this form, if you haven't already:  
<https://forms.gle/DDBFWN6D1CH5uec58>
  - For Concurrent Enrollment (CE):
    - Fill in this form, if you haven't already:  
<https://forms.gle/5cjKzgSoRVjSf9uW8>

# Warning: historically high GPA of this course

- Survivor bias
- High class GPA != easy course
- This is a FUN but INTENSE class
- Many people will drop out, switch to pass/fail.

# Why you should NOT take this class

---

- Project-based class
  - No canned problem sets
  - No clean rubrics
  - Open-ended by design
  - Coding from scratch
  - Will try to make sure everyone understands the basics super-well, before covering advanced topics
- Need time to think, not just hack
  - **Creativity** is a class requirement
  - We already expect you to know Deep Learning!
- Lots of work...There are easier classes if
  - you just need some units
  - you care more about the grade than about learning stuff
- **Not worth it if you don't enjoy it**

# Now... reasons TO take this class

---

- It's your reward after 3 grueling years ☺
- You get to work with pictures, unleash your creative potential
- Interested in grad school? ☺

---

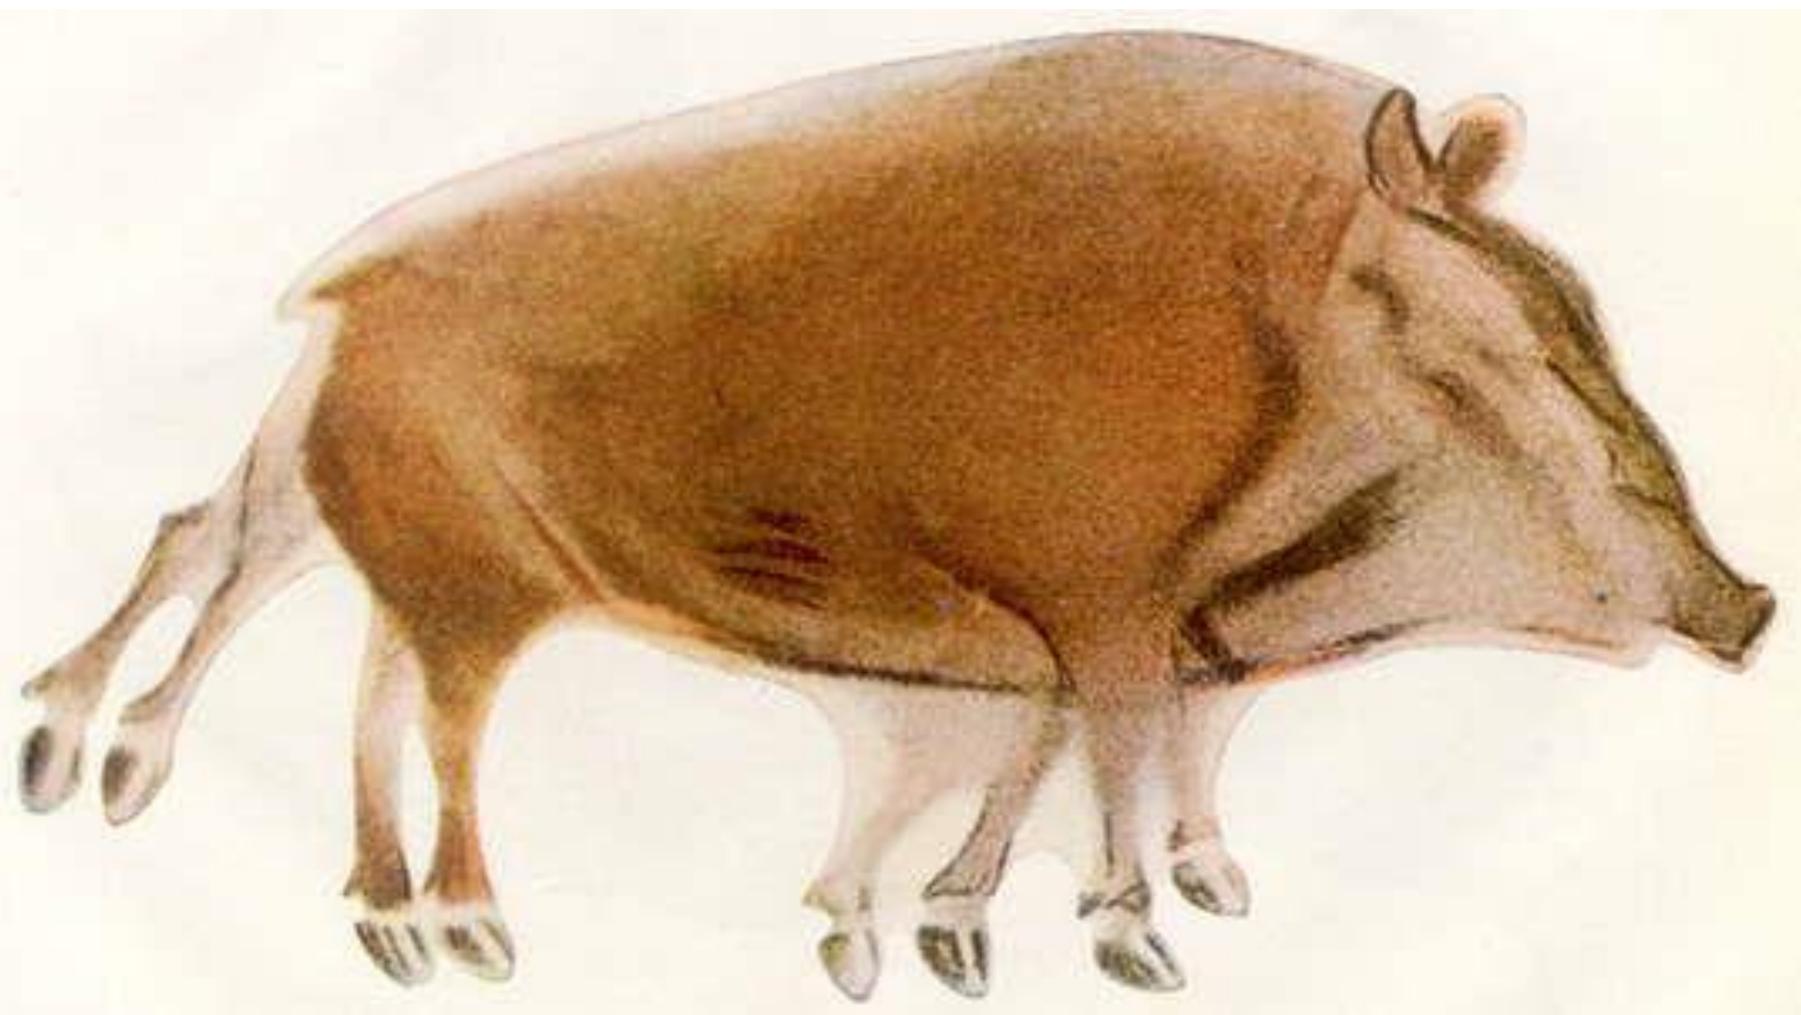

# A Brief History of the Visual Data

# Depicting Our World: The Beginning

---

Prehistoric Painting, Lascaux Cave, France  
~ 13,000 -- 15,000 B.C.

Prehistoric Cave Painting, Altamira  
~ 20,000 – 15,000 B.C.

# Depicting Our World: Middle Ages

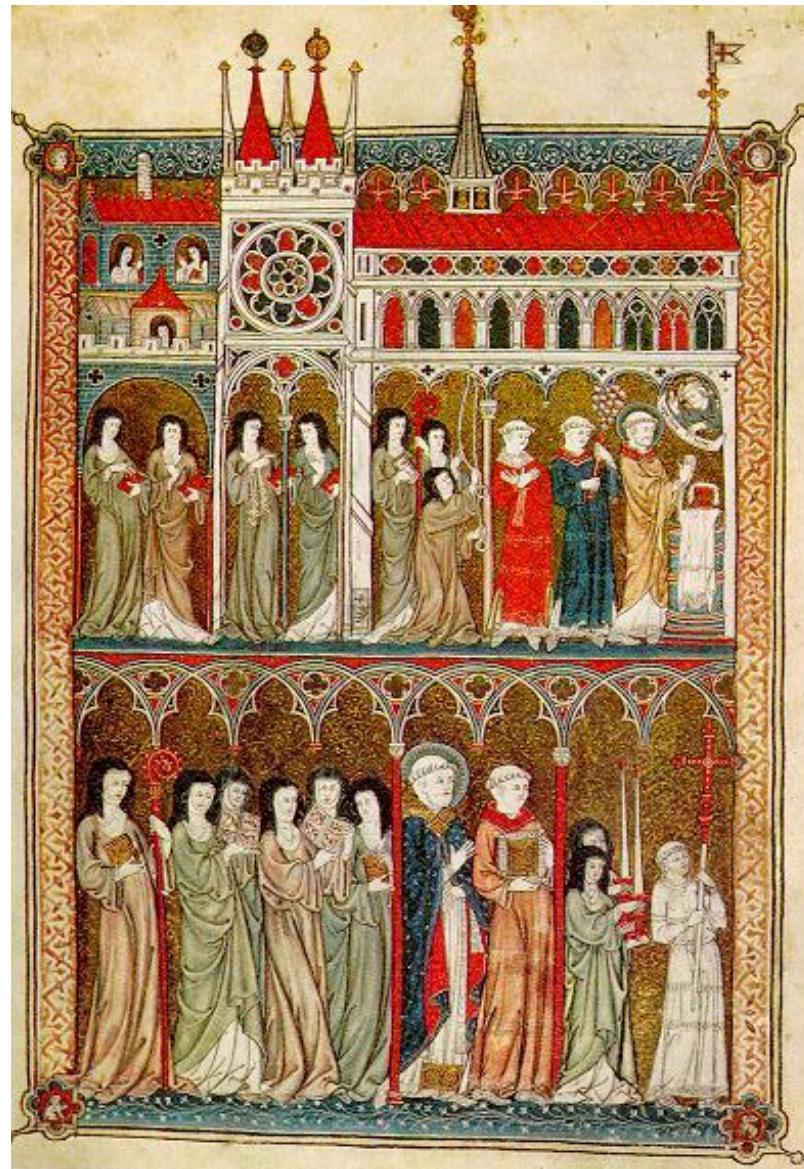

---

The Empress Theodora with her court.  
Ravenna, St. Vitale 6th c.

# Depicting Our World: Middle Ages

---

Nuns in Procession. French ms. ca. 1300.

# Beginnings of the Renaissance

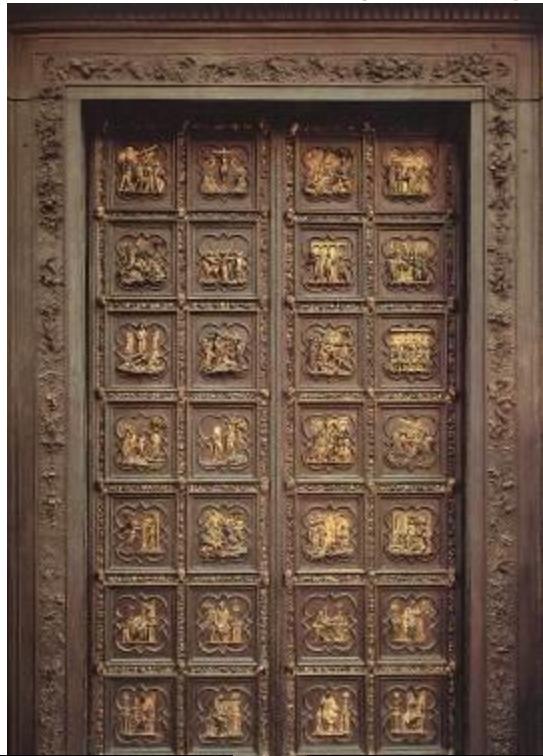

---

Giotto, *The Mourning of Christ*, c.1305

# Depicting Our World: Renaissance

North Doors (1424)

Lorenzo  
Ghiberti  
(1378-1455)

East Doors (1452)

# Depicting Our World: Renaissance

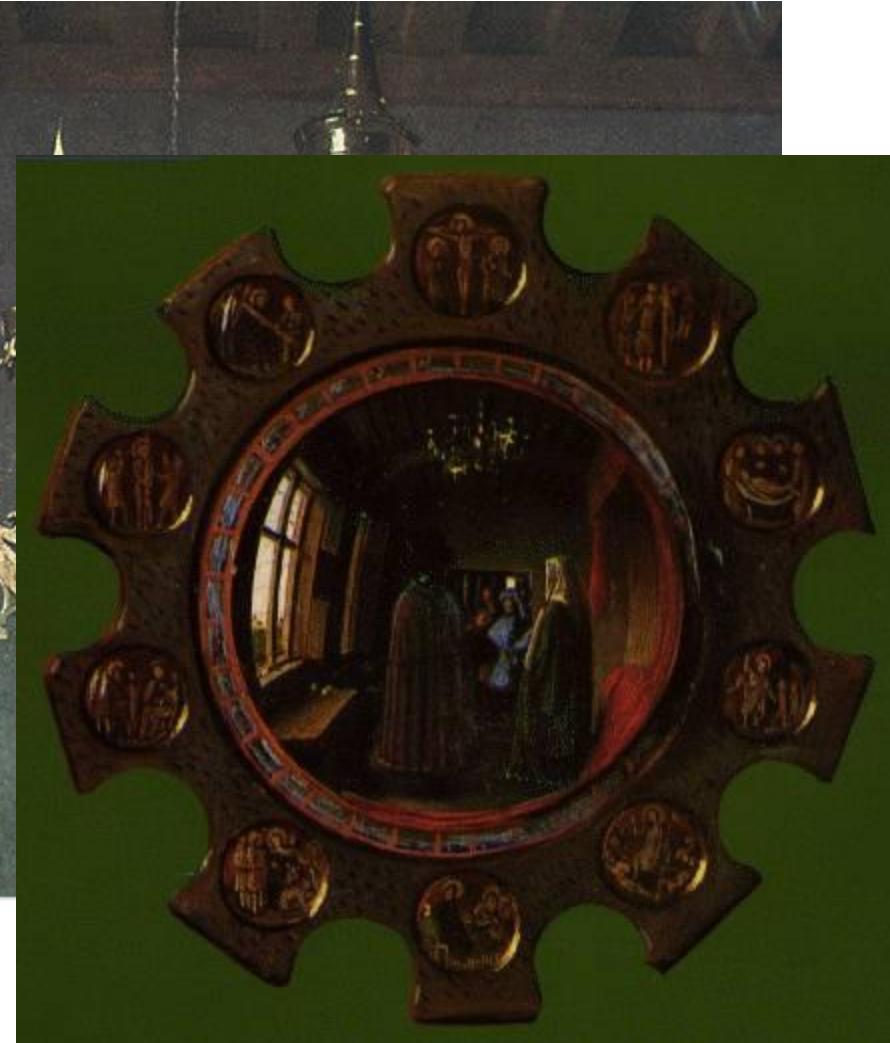

---

**Piero della Francesca,**  
*The Flagellation* (c.1469)

# Depicting Our World: Toward Perfection

---

**Jan van Eyck, *The Arnolfini Marriage* (c. 1434)**

# Depicting Our World: Toward Perfection

---

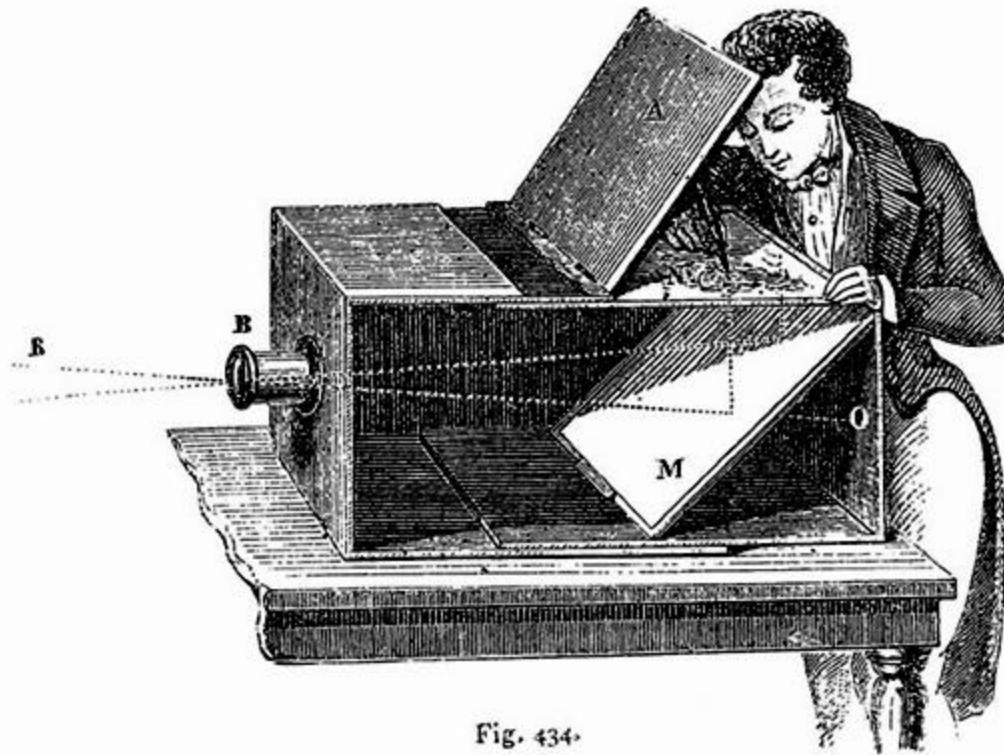

Fig. 434.

Lens Based Camera Obscura, 1568

# Depicting Our World: Perfection!

---

*Boulevard du Temple*, Louis Daguerre, 1838

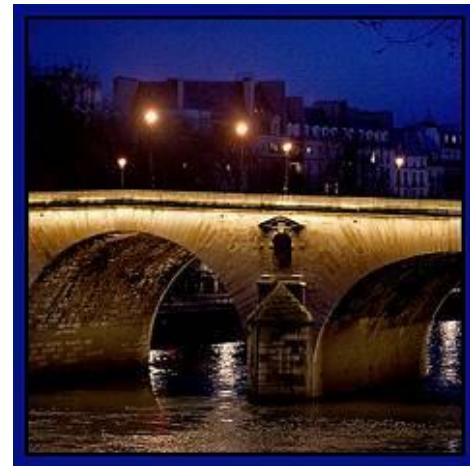

# Depicting Our World: Realism?

---

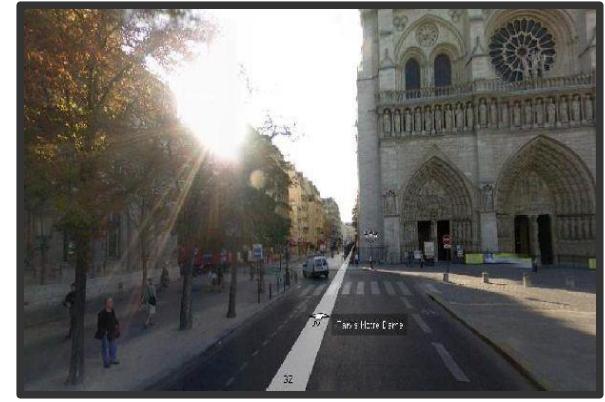

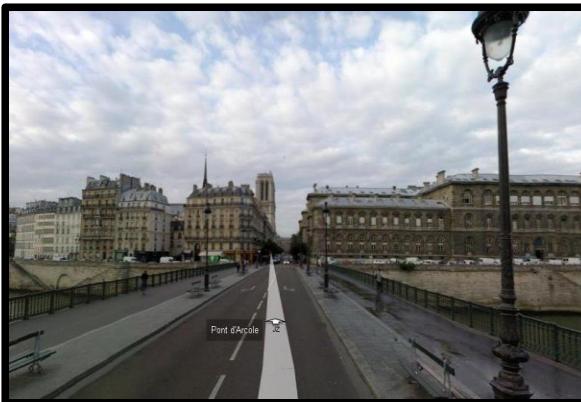

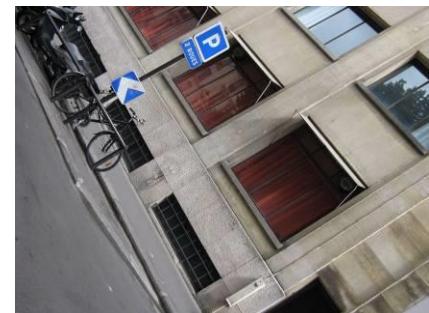

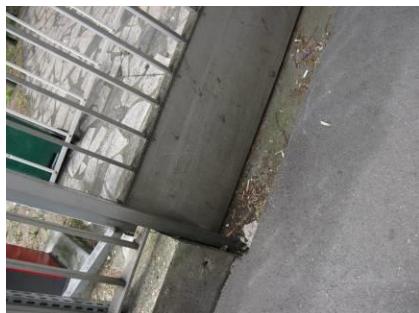

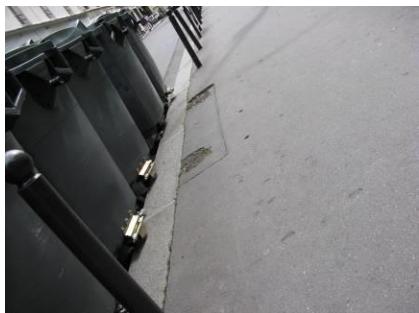

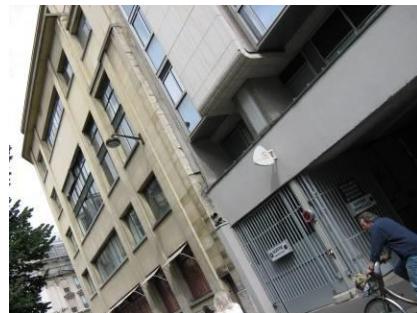

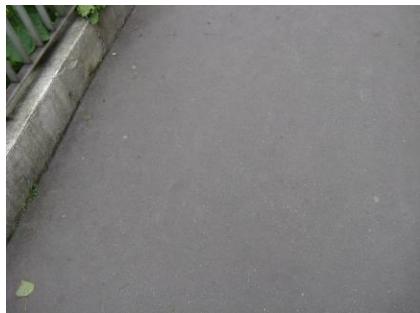

# Paris, according to Flickr

# Paris, according to Google StreetView

# Paris, according to me

# After realism...

Monet,  
La rue Montorgueil

# Depicting Our World: Ongoing Quest

---

Pablo Picasso

David Hockney

# Better than realism?

---

David Hockney, Place Furstenberg (1985)

# Which one is right?

---

**Multiple viewpoints**

David Hockney,  
Place Furstenberg,  
1985

**Single viewpoint**

Alyosha Efros  
Place Furstenberg,  
2009

# Depicting Our World: Ongoing Quest

---

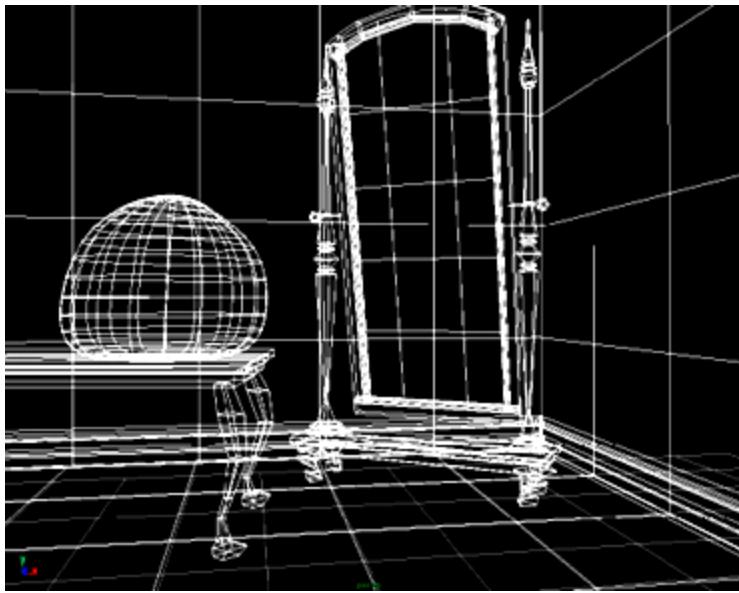

Antonio Torralba & Aude Oliva (2002)

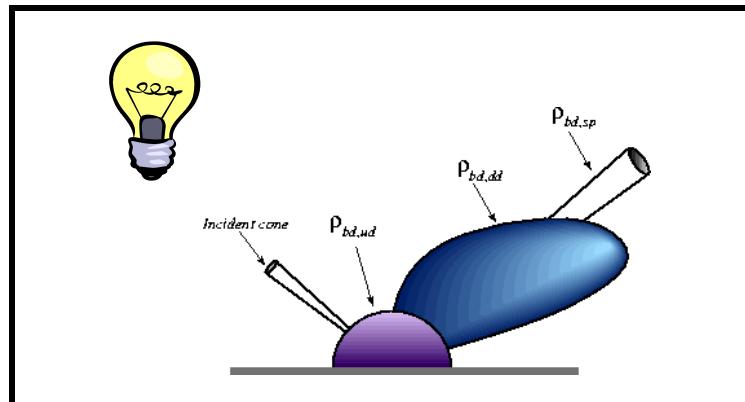

Enter Computer Graphics...

# Traditional Computer Graphics

3D geometry

physics

projection

Simulation

GRAPHICS

# Modern Computer Graphics

---

- Amazingly real
- But so sterile, lifeless, *futuristic* (*why?*)

# The richness of our everyday world

---

Photo by Svetlana Lazebnik

# Beauty in complexity

---

# Which parts are hard to model?

---

Photo by Svetlana Lazebnik

# Creating Realistic Imagery

---

## Computer Graphics

- + great creative possibilities
- + easy to manipulate objects/viewpoint
- Tremendous expertise and effort to obtain realism

## Computational Photography

Realism  
Manipulation  
Ease of capture

## Photography

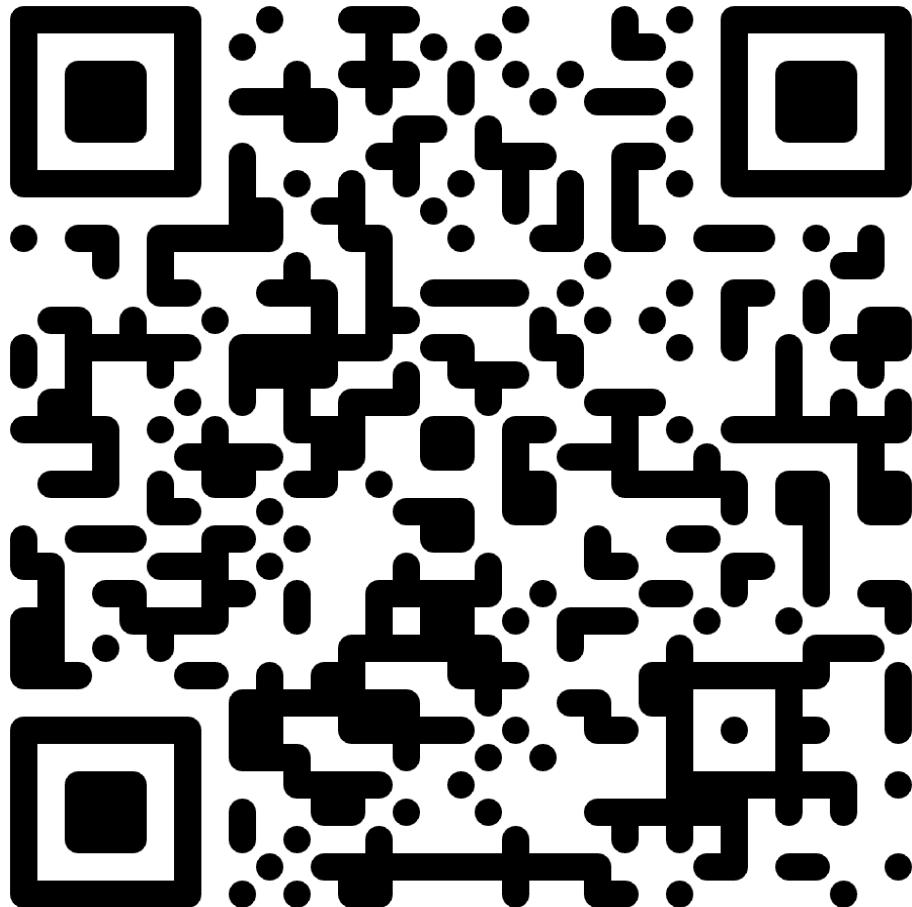

- + instantly realistic
- + easy to acquire
- very hard to manipulate objects/viewpoint

# Pop Quiz!

---

- Don't worry, this time, we grade only on participation
- Quiz designed to diagnose your level of preparation for CS180
- Should take about 10-15 minutes
  - If you are DSP, you can take up to 30 minutes

<https://forms.gle/17c6YUfNaStgJpcM9>
